SUMMARY

Software & Data Engineer delivering high-performance data pipelines in Rust and Python. Created a Python data-analysis tool for university security, enabling proactive risk identification. Engineered modular data-cleaning pipelines that transformed raw logs into actionable insights for the police department. Eager to leverage these skills to build reliable data solutions that drive business impact.

EDUCATION

University of Oregon

2024 - 2026

Bachelor of Science, Data Science

- **Coursework:** Machine Learning, Data Mining, Exploration, & Visualization, Game Programming, Linear Algebra 2

SKILLS

- **Languages:** Rust, Python, SQL, JavaScript/CSS/HTML, C/C#, R, Bash
- **Data & Math:** Statistical Modeling, NumPy, Pandas, Scikit-learn, PyTorch
- **Tools:** Git/GitHub, Excel, Arch Linux, Unity, Blender
- **Character Traits:** Kind, Resilient, Organized, Communicative

Projects

RAI | <https://github.com/lsalgado7/RAI>

- Engineered an autonomous multi-agent system using Python and the Gemini API to streamline open-source dataset discovery for researchers.

3D Portfolio Website | <https://lsalgado.vercel.app/>

- Built an interactive 3D space optimized for web-performance with Three.js & HTML/SCSS.

Sentinel

- Developed a high-performance Rust/SQL data pipeline to automate the collection, storage, and encryption of local digital footprints.
- Automated data analysis & created an interactive dashboard using Python & Flet to help users quantify their behaviors.

EMPLOYMENT

University of Oregon

Neuroscience Research Assistant

Eugene, OR • Nov 2025 - Present

- Implemented complex mathematical models and 3D simulations in Python, C#, and Unity, improving the team's ability to visualize data and test ideas more efficiently.
- Improved mathematical algorithms for fractal dimension estimation in 2D models, increasing analysis accuracy by ~40%.

Student Communications Technician

Eugene, OR • Nov 2024 - Present

- Engineered a data-analysis tool in Python to process proximity access logs, enabling leadership to identify and mitigate physical security risks proactively.
- Developed modular data-cleaning pipelines in Python with pandas to convert raw, unstructured records into clear reports for the UO Police Department.

BJ's Restaurant & Brewhouse

Server

Eugene, OR • Nov 2022 - Apr 2025

- Served on average 20 guests at a time with exemplary teamwork and time management.

Achievements

- **Eagle Scout:** Achieved Eagle Scout; During my 10 years in Scouts BSA I notably led a troop of ~20 & managed large-scale community construction projects.
- **Quackhacks 2025:** Top 5 placement, engineered a educational video game using machine learning to control a character through the users webcam.
